

Approving work and setting dates

Three gates and one date box. Every step here shows the screen and where to click on it.

ANSWERING TIME OFF MOVED

Approving sick days and days off is now in **Attendance & Compensation Policy**, clause 3.6, together with the rules staff are reading. One page for the whole studio instead of the same thing written twice.

WHO HOLDS THE JOB AT EACH STAGE

Three coloured stops, three decisions. Everything between them moves on its own.

01 What changed from ClickUp

Four things work differently. If you read nothing else, read these.

IN CLICKUP	IN GOODDAY
The brief was overwritten each time new client notes arrived	The original brief never changes. Each round's notes live on that round's numbered ticket and are never overwritten
Several date fields, and people worked to whichever one they opened	One box moves. Deadline is this round's date, and you change it every round
An SPV approval could carry a job further than intended	Two separate approval boxes. An SPV approval cannot skip Julius
You told the editor in chat that it was coming back	The job returns on its own with a ticket, and the editor is told

02 Opening a job

One form. One job per deliverable. Never two deliverables on one ticket.

1 Open Quick add and choose Request

The + button at the bottom of the icon rail, on the very edge of the window. It works from anywhere in GoodDay, so you do not have to be on the Projects board first.

Request is where every form in the studio lives, not just this one.

Quick add · Request

- ☐ Daily Standup fill every working day
- ☒ Project Form THIS ONE
- ☐ Time Off Request when you are not working
- ☐ SD-Bug Report for bugs, not jobs

Four forms, and that is the whole list. Project Form opens a job, Daily Standup and Time Off Request are the attendance ones, and Bug Report is for reporting a problem with the system itself.

WHY THIS ROUTE AND NOT THE TAB ON THE BOARD

Projects has a tab called Project Form as well, and for an ordinary member it opens the same form. For anyone with full access, which means Rashy and Julius, that tab opens the form designer instead. It looks almost identical, with the same fields in the same order, but you are editing the form itself rather than filling one in. Nothing you type there opens a job.

You can tell them apart in one glance. The designer has a grey strip above the form reading **Form Designer**, **Settings**, **Submissions**. The real form does not, and its heading bar reads **Request > Project Form**. Quick add always gives you the real one, whoever you are.

IF YOU LAND IN THE DESIGNER, LEAVE IT ALONE

Do not edit fields to make a job work. Changing anything there changes the form for all thirteen editors and for every job opened after it. Close it and come back through Quick add.

Always use this form. If you open a bare task instead, half the automations will not fire.

● Projects · Project Form

Job name *
Client name – what the job is. Write it the same way every time.

EP 99 CUTDOWN

Client *
Pick the client's account from the list. Every client lives in the CRM, so if they are not here they have not been set up yet.

No account [CLICK](#)

Project #
Optional. The only field on this form that is not required, so skip it if the job has no number.

blank is fine

IF THE CLIENT IS NOT IN THE LIST

They have not been set up yet. Add them once in the CRM and they are there for everyone, on every job, for good. Do not type the client name into the job title instead. That breaks every report that counts work by client.

The CRM is not inside Staff Hub. It is its own section, reached from the icon rail down the far left of the window, third icon from the top.

● Far-left icon rail

☐ Home

☐ Team

☒ CRM [CLICK](#)

☐ Folders

☐ Tasks

The thin strip of icons on the very edge of the window, not the Staff Hub list beside it. Direct link: `goodday.work/crm/accounts`

That opens CRM Accounts. Every client the studio works with is one row. New Account is top right.

[New Account](#)

☐ Client A	Account owner
☐ Client B	Account owner
☐ Client C	Account owner
☐ Internal	Account owner

Name is the only field that has to be filled. Website, phone and email can wait. Internal is the account to use for our own work, so studio jobs still report cleanly instead of sitting with no client at all.

NAME IT ONCE, NAME IT RIGHT

Whatever you type becomes the name on every job and every report from then on. Renaming later is one edit in the CRM, but two accounts for the same client is a mess that has to be untangled by hand, so check it is not already there under a slightly different spelling before you add it.

● Projects · Project Form

Project Owner *

The SPV who will check this job once the cut is ready.

Not assigned [CLICK](#)

Assigned to

The editor who will cut it. Leave blank if a freelancer is doing it and tick the box below instead.

Editor A

Other editors on this job

Optional. Only when more than one editor is cutting it. The lead goes in Assigned to above, everyone else goes here.

Editor B

Freelancer job

Tick this if someone outside the studio is working on it.

not ticked

PROJECT OWNER IS NOT DECORATION

Whoever you name here is the person the job goes to at SENT TO SPV. It puts the job in their list and sends them the message. Name the wrong person and the cut sits in the wrong list. Leave it empty and nobody is told at all.

TWO EDITORS ON ONE JOB

GoodDay tracks **one** assignee per job and there is no way around that. So the lead editor goes in **Assigned to**, and anyone else cutting the same job goes in **Other editors on this job**. Naming somebody there puts the job on their board and sends them everything that happens to it, within seconds. It does not make them the assignee, so the job still belongs to one person and nobody is counted twice in workload.

Fill it at the same time you fill Assigned to. If you add a second editor later that works too, but they see nothing until you do.

● Projects · Project Form

Start / End *

Start is the day the editor picks it up. End is the date we are promising the client the finished film.

Sep 8 → Sep 30

Deadline *

The date this round is due back. At intake that is the first cut with the SPV, not the client date.

Sep 18 **THIS ONE MOVES**

Original client deadline

At intake this is the same date as the client delivery date above. Type it again here. This copy never changes.

Sep 30

● Projects · Project Form

Brief *

Type or paste the whole brief here. It lands at the top of the ticket as the job description and is never edited after that.

15 second teaser for IG, vertical. Interview beat at the top, then B-roll...

Main Asset *

A link. Footage lives on Drive or Frame.io, so paste the link rather than trying to move the files.

drive.google.com/...

Main Asset file

Optional, and for documents only. A brief deck, a reference PDF, a script. Upload it here and it stays with the job. Never footage.

attach a file

Estimate - how big is this job? *

Use the DAYS row. Half a day, one day, two days. Do not work out exact hours.

2 days **USE THE DAYS ROW**

On the job itself the estimate reads back in hours, because that is how GoodDay stores it. One day is 8 hours. Same number, shown differently. It only has to be roughly right, so the Workload view can show who is full.

7 Leave Priority on Normal unless there is a reason

● Priority

- Emergency
- Blocker
- Highest
- High
- Normal **DEFAULT**
- Low
- Lowest

We use three of these: Low, Normal, High. The four faded ones cannot be removed from GoodDay's list, but they are not part of how we work.

High means this job jumps the queue ahead of the editor's other work. If everything is marked High, the flag stops meaning anything.

03 The three dates

This is where most of the confusion comes from, so here it is in one table.

BOX	MEANS	WHO MOVES IT	MOVES?
Deadline	When this round is due back. At intake that is the first cut with the SPV.	SPV or Julius	Every round
Start / End	Start is when the editor picks it up. End is the date we promised the client.	Producer at intake	Only if we re-promise
Original client deadline	The first date we ever promised, kept so a re-promise shows up.	Nobody, after intake	Never

THE RULE, IN ONE LINE

The editor works to Deadline and nothing else. So every time you send a job back, set the new Deadline in the same breath. If you do not, the editor is working to last round's date.

The reason it is that box and not a custom field: Deadline is the one date GoodDay shows at the top of every job, in every list, on the calendar, and in each person's My Work. It turns red by itself when it passes. It is also the only date that can fire the 7am due tomorrow message.

Your gate. Every cut passes through it, including every client round.

1 You get a message when a cut is waiting

 A cut is waiting for your review

A cut is waiting for your review.

You are named as Project Owner on this job, so it is your call.

Watch it, then set **Review result** on the job. Approved or Needs revision. That is the only field you touch. The board moves itself from there.

 If it needs another round, set the new **Deadline** while you are in there, so the editor knows what they are working to.

The job also shows up in your list, with Action required set to you.

2 Open the job and find Review result

PRO-15 · EP 99 CUTDOWN

Status	SENT TO SPV	
Action required	You	
Deadline	Sep 18	
Review result	empty	CLICK
Final approval	empty. Julius's box	

Do not change the status by hand. Setting this field moves the job for you.

3 Pick Approved or Needs revision

● Review result

■ Approved

■ Needs revision

Approved

Goes to **FINAL REVIEW** and lands in Julius's list.
Your part is done.

Needs revision

Goes to **INTERNAL REVISION**. A numbered ticket is made and given to the editor, and they are told.

4 If it is going back, set the new Deadline

● PRO-15 · EP 99 CUTDOWN

Status

INTERNAL REVISION

Deadline

Sep 18

CHANGE THIS

Original client deadline

Sep 26 · leave alone

Two dates that look alike, and only the top one moves. Deadline sits at the top of the job and means this round. Original client deadline is further down in the fields and is the promise made at the start, so it never changes.

You set this date, and you set it around the editor. Ask how long the round actually needs and use that answer, because a date built on what you wish were true is a date that slips.

The one rule: it has to land before the Original client deadline. If the editor's honest estimate pushes past it, that is a conversation to have today, with Julius and with the client, rather than on the day it is due.

Nothing moves this date for you. The moment a job goes into either revision state you and Julius both get a message asking you to set it, because a stale deadline is worse than no deadline.

5 Write what to change, on the ticket

The ticket for this round appears by itself, underneath the job. Open it and write the notes in Revision brief on the ticket. That is the box the editor reads, and it is the only place the notes need to go.

The screenshot shows a dark-themed interface for a ticket titled "PR0-15 · Internal revision 2". Inside the ticket, there is a section labeled "Revision brief" with the text "Cut the intro by 3 seconds. Music too loud under the VO." and a yellow button labeled "WRITE HERE". Below this, there is a section labeled "Files for this round" with the text "attach the PDF, the doc, the extra footage".

Revision brief now sits on the ticket, not on the job. Round two's notes stay on round two's ticket for good.

Each round gets its own numbered ticket, so nothing is ever overwritten.

The screenshot shows a dark-themed interface for a ticket titled "PR0-15 · Subtasks". Inside the ticket, there is a section labeled "Internal revision 1" with a "ROUND DONE" status. Below this, there is a section labeled "Internal revision 2" with a yellow button labeled "PASTE HERE".

The ticket appears by itself. It is created empty, so it is on you to fill it.

This used to be written twice, once on the job and once on the ticket, because the box on the job was overwritten every round. That box is gone. The notes are written once, on the round they belong to, and they stay there.

NEVER EDIT THE BRIEF AT THE TOP

The brief at the top of the job is the original ask and it stays untouched for the life of the job. Round notes belong on the round's ticket. Overwriting the original is the ClickUp habit that lost the studio its history: by round four nobody could see what was first agreed.

6 The job comes back to you on its own

The editor does the work and sets the ticket to **ROUND DONE**. You do not chase anyone for a status change, and the editor never touches the job status.

● PRO-15 · EP 99 CUTDOWN

☐ Internal revision 1	ROUND DONE
☐ Internal revision 2	ROUND DONE
Status	SENT TO SPV

Once every ticket on the job is ROUND DONE, the job moves itself back to SENT TO SPV and you are messaged.

If a job is sitting in a revision state with every ticket already closed, something has gone wrong. Tell Joshua.

05 Julius at final review

A different box from the SPV's. That is on purpose.

1 You get a message when one reaches you

🎯 Final review - your call

🎯 This one passed the SPV and is now your call.

Your field is **Final approval**, not Review result, which belongs to the SPV. Set it to **Approved** or **Needs revision**.

⚠️ **Approving sends it.** The job moves itself straight to **SENT TO CLIENT** and today is stamped as the day the client got it, so only approve when the file is actually going out today.

2 Use Final approval, not Review result

PRO-15 • EP 99 CUTDOWN

Status

FINAL REVIEW

Action required

You

Review result

empty. Not this one

Final approval

empty

CLICK

If you set Review result here by mistake, the board will tell you. It clears the box and sends you a note saying which one you wanted.

⚠ Wrong box, nothing moved

You set Review result on EP 99 CUTDOWN, but this job is at FINAL REVIEW. That gate does not read Review result, so nothing has moved.

I have cleared the box for you. Open the job and set Final approval instead. Approved sends it to the client. Needs revision sends it back to the editor.

The guard. Without it the wrong box would fail in silence, which is the kind of thing that makes people give up on a new system.

Approved

Goes straight to SENT TO CLIENT, and today is stamped as the day the client got it.

Needs revision

Back to INTERNAL REVISION with a numbered ticket for the editor.

APPROVING SENDS IT

The moment you approve, the board stamps today as the day the file went to the client. If it is actually going out tomorrow, that number is wrong and so is every report built on it. Only approve when the file is going out that day.

WHY TWO BOXES

If both gates read the same field, one SPV approval can carry a job through your gate and out the door. That happened in testing on 12 September. Separating them means your check cannot be skipped, including by accident.

06 Julius, once it is with the client

Now you are passing on what the client said, and the field changes back.

1 Use Review result again. It arrives empty

● PRO-15 · EP 99 CUTDOWN

Status	SENT TO CLIENT
Action required	You
Sent to client on	Sep 13
Review result	empty

CLICK

It is cleared on the way through final review, so there is never a stale value sitting in it.

Approved

APPROVED. The date done is stamped and the job clears out of everyone's list.

Needs revision

CLIENT REVISION, with a numbered client ticket made for the editor.

2 Put everything the client sent onto the ticket

The ticket makes itself the moment the job goes into CLIENT REVISION. Open the job and it is waiting in the subtask list, empty and numbered for you.

● PRO-39 · EP 99 CUTDOWN

☐ Internal revision 1

ROUND DONE

☐ Client revision 1

ROUND DONE

☐ Client revision 2

OPEN THIS

Round two is the one you just triggered. The earlier tickets stay exactly as they were, which is the point of them.

Inside it there are two boxes. Both are yours.

● PRO-39 · Client revision 2

Revision brief

WRITE HERE

The client's own words, written straight onto this ticket. There is no copy on the job any more.

Cut the intro to 3 seconds, swap the logo sting for the new one, and bring the music under the VO from 0:12.

Files for this round

ATTACH HERE

Attach the document, the PDF or the extra footage. Big footage stays on Drive or Frame.io, so paste that link in as well.

<https://f.io/a7d2c9> · 2 attachments

Client feedback arrives in every shape: a document, a Word file, a PDF, extra footage, a link, or notes in Frame.io. All of it goes on the ticket, not into a chat message where it cannot be found again.

NOT ON THIS TICKET

There is no date on the ticket, and that is deliberate. The editor works to the Deadline at the top of the job, and setting it is the next step.

3 Then set the new Deadline on the job

● PRO-15 · EP 99 CUTDOWN

Status	CLIENT REVISION
Action required	The editor
Deadline	Sep 22 YOU SET THIS
Original client deadline	Sep 26 · leave alone
Review result	cleared automatically
Client revision rounds	2

The status, the round counter and the ticket are all handled for you. The date is the one thing that needs a person.

07 The revision log

What replaced the ClickUp log.

● PRO-15 · Subtasks

☒ Internal revision 1	closed
☒ Internal revision 2	closed
☒ Client revision 1	closed
☐ Client revision 2	open

Internal and client rounds are counted separately, so you can see at a glance whether the rounds are coming from inside the studio or from the client.

Each ticket holds that round's notes and that round's files. Nothing on a ticket is overwritten. Open a job a month later and you can read the whole history in order: the original brief at the top of the job, then every round underneath it.

There is no longer a copy on the job. `Revision brief` and `Files for this round` exist once per ticket, so the question “what did round two actually ask for” always has an answer.

LIVES ON THE JOB	LIVES ON THE ROUND'S TICKET
The brief at the top, never edited	What to change this round, kept for good
The original brief and the main asset	Revision brief , this round's notes
Deadline , the live date	The files and links for this round
The round counters	Whether the round is finished

WHY THE DATE IS NOT ON THE TICKET

If it were, an editor with three open tickets would have three dates to compare. Keeping it on the job means one live date and one place to change it.

08 Who gets the next job

1 Read the two views before you assign

Nobody is asked how busy they feel any more. Two views answer it from work that is already on the board.

On whose desk, a tab on Projects, groups every job by **Action required**. That is the honest picture of right now, because a job sitting at SENT TO SPV or SENT TO CLIENT is open but is not on the editor. An editor with no rows under their name has nothing waiting on them.

Projects · On whose desk	
☐ Editor A	4 jobs
☐ Editor B	1 job
☐ Editor C	NOTHING WAITING

Grouped by Action required. No rows under a name means nothing is waiting on that person today.

Workload, also on Projects, is the forward view. It spreads each job's **Estimate** across its **Start / End** and stacks it per person, so you can see who is booked solid next week.

WORKLOAD SHOWS WHAT SOMEONE IS COMMITTED TO, NOT WHAT THEY ARE DOING

It is built from estimates and dates, not from hours anyone logged. If an editor finishes a job two days early, Workload still shows those two days as full. So read Workload for the weeks ahead and **On whose desk** for today. Where they disagree, On whose desk is right.

Both need three things on a job to work: an assignee, a Start and End, and an Estimate. The intake form makes all three compulsory, so the only jobs that fall through are freelancer ones with nobody assigned, and those show under Not assigned.

09 What runs itself

So you know what not to do by hand, and what the system will not do for you.

WHEN	WHAT HAPPENS BY ITSELF
A job is created on the form	The SPV and Joshua are added to it, the editor is briefed, and a freelancer job goes to Julius
Status reaches SENT TO SPV	The named SPV is messaged and the job enters their list
SPV approves	Status becomes FINAL REVIEW, Julius is messaged, Review result is cleared
Julius sets Final approval to Approved	Status becomes SENT TO CLIENT and the sent to client date is stamped
Anyone asks for changes	Status moves back, the round counter goes up by one, a numbered ticket is made and given to the editor, the editor is told, and you and Julius are asked to set the new Deadline
Every ticket on a job is set to ROUND DONE	The job moves itself back to SENT TO SPV and the SPV is messaged
Client approves	Status becomes APPROVED, date done is stamped, the list is cleared
7am the day before a deadline	Whoever holds the job is reminded, but only while it is on their desk

What it will not do

- **Set the deadline for you.** GoodDay cannot work out how long a round should take, and we decided on purpose not to let it guess. Every new date is your decision. All the system does is ask you for it.
- **Write the notes for you.** The ticket is made empty. If nobody writes what to change, the editor gets a numbered ticket that says nothing.
- **Show a countdown in a message.** GoodDay notifications cannot print a date or "5 days remaining". That is what the 7am message and the red overdue marker are for.
- **Undo a wrong approval.** If you approve at final review, the file is marked as sent to the client today. There is no way to un-stamp that date.

The short version

1. **SPV:** `Review result` at SENT TO SPV. Set the new `Deadline` on the job whenever you send it back, and write `Revision brief` on the new ticket.
2. **Julius at final review:** `Final approval`, never `Review result`. Approved means it goes out today.
3. **Julius at SENT TO CLIENT:** `Review result` again. Client notes go on the new ticket, in `Revision brief`, with anything they sent in `Files for this round`. Never in the brief at the top.
4. **Everyone:** one date box moves, and it is `Deadline`.

5. **Attendance:** answer with , never by moving the status. Jobs and absences work the same way: you set the box and the board moves the status for you. Paid leave is a deliberate choice.

Planaria Studio · Leadership workflow in GoodDay · for SPVs and Julius · September 2026. If something here does not match what you see on screen, the screen is right and this page is out of date.
